Basel II Data (Consolidated)

Mitsubishi UFJ Financial Group, Inc.	28
--------------------------------------	----

Risk Management

Overview

Numerous changes in our business environment have occurred as a result of globalization of the financial industry, the advancement of information technology, and changes in economic conditions. We aim to be a global and comprehensive financial group encompassing leading commercial and trust banks, and securities firms in Japan. Risk management plays an increasingly important role as the risks faced by financial groups such as us increase in scope and variety.

We identify various risks arising from businesses based on uniform criteria, and implement integrated risk management to ensure a stronger financial condition and to maximize shareholder value. Based on this policy, we identify, measure, control and monitor a wide variety of risks so as to achieve a stable balance between earnings and risks. We undertake risk management to create an appropriate capital structure and to achieve optimal allocation of resources.

Risk Classification

At the holding company level, we broadly classify and define risk categories faced by the Group including those that are summarized below. Group companies perform more detailed risk management based on their respective operations.

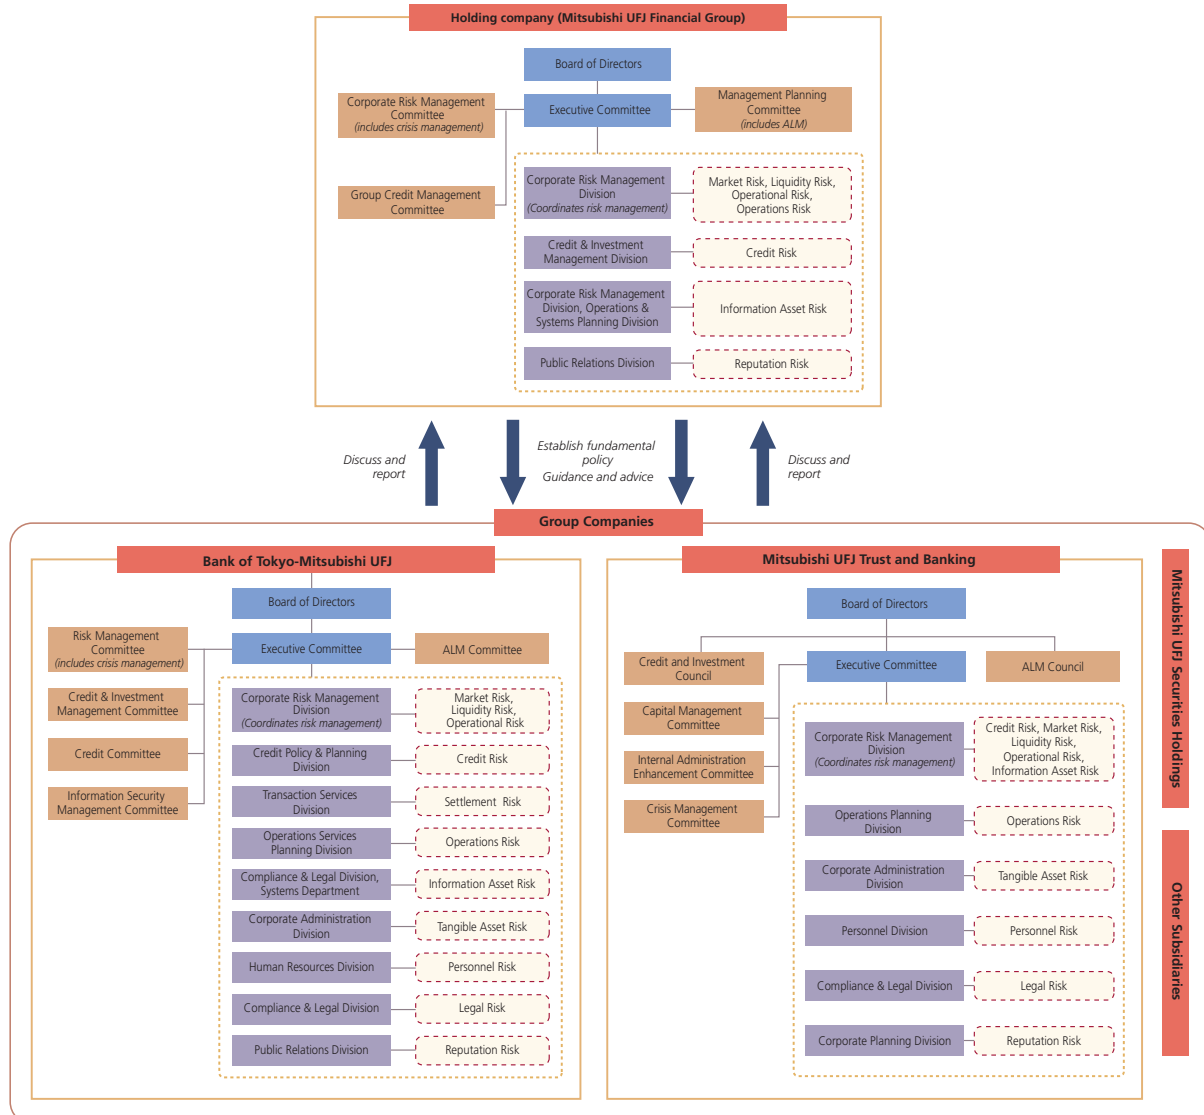

Type of Risk	Definition
Credit Risk	The risk of financial loss in credit assets (including off-balance sheet instruments) caused by deterioration in the credit conditions of counterparties. This category includes country risk.
Market Risk	Market risk is the risk of financial loss where the value of our assets and liabilities could be adversely affected by changes in market variables such as interest rates, securities prices and foreign exchange rates. Market liquidity risk is the risk of financial loss caused by the inability to secure market transactions at the required volume or price levels as a result of market turbulence or lack of trading liquidity.
Liquidity Risk	The risk of incurring loss if a poor financial position at a group company hampers the ability to meet funding requirements or necessitates fund procurement at interest rates markedly higher than normal.
Operational Risk	The risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events.
Operations Risk	The risk of incurring loss that might be caused by negligence of correct operational processing, or by incidents or misconduct by either officers or staff, as well as risks similar to this risk.
Information Asset Risk	The risk of loss caused by loss, alteration, falsification or leakage of information, or by destruction, disruption, errors or misuse of information systems, as well as risks similar to this risk.
Reputation Risk	The risk of loss due to deterioration in reputation as a consequence of the spread of rumors among customers or in the market, or as a consequence of inadequate response to the circumstance by MUFG, as well as risks similar to this risk.

Risk Management System

We have adopted an integrated risk management system to promote close cooperation among the holding company and group companies. The holding company and the major subsidiaries (which include The Bank of Tokyo-Mitsubishi UFJ, Ltd., or BTMU, Mitsubishi UFJ Trust and Banking Corporation, or MUTB, and Mitsubishi UFJ Securities Holdings Co., Ltd., or MUSHD) each appoint a Chief Risk Management Officer and establish an independent risk management division. At the Risk Management Committees, our management members discuss and dynamically manage various types of risks from both qualitative and quantitative perspectives. The board of directors determines risk management policies for various types of risk based on the discussions held by these committees.

The holding company seeks to enhance group-wide risk identification, to integrate and improve the Group's risk management system and related methods, to maintain asset quality, and to eliminate concentrations of specific risks. Group-wide risk management policy is determined at the holding company level and each group company implements and improves its own risk management system based on this policy.

Risk Management System

Business Continuity Management

Based on a clear critical response rationale and associated decision-making criteria, we have developed systems to ensure that operations are not interrupted or can be restored to normal quickly in the event of a natural disaster or system failure so as to minimize any disruption to customers and markets. A crisis management team within the holding company is the central coordinating body in the event of any emergency. Based on information collected from crisis management personnel at the major subsidiaries, this central body would assess the overall impact of a crisis on the Group's business and establish task forces that could implement all countermeasures to restore full operations. We have business continuity plans to maintain continuous operational viability in the event of natural disasters, system failures and other types of emergencies. Regular training drills are conducted to upgrade the practical effectiveness of these systems.

The Great East Japan Earthquake created unprecedented and extreme circumstances, an electricity power supply shortage and a need for all companies in Japan, including us, to reduce their electricity consumption. We have initiated a comprehensive review of our existing business continuity plan to more effectively respond to these circumstances as well as further extreme scenarios, such as a sudden massive blackout in major metropolitan areas in Japan.

Implementation of Basel Regulation

Basel II, as adopted by the Japanese FSA, has been applied to Japanese banks since March 31, 2007. Basel II is a comprehensive regulatory framework based on "three pillars": (1) minimum capital requirements, (2) the self-regulation of financial institutions based on supervisory review process, and (3) market discipline through the disclosure of information. Based on the principles of Basel II, MUFG has adopted the Advanced Internal Ratings-Based Approach to calculate its capital requirements for credit risk since March 31, 2009. The Standardized Approach is used for some subsidiaries that are considered to be immaterial to our overall capital requirements, and UNBC has adopted a phased rollout of the Internal Ratings-Based Approach. MUFG has adopted the Advanced Measurement Approach since March 31, 2012 to calculate its capital requirements for operational risk. As for market risk, MUFG has adopted the Internal Models Approach mainly to calculate general market risk and adopted the Standardized Method to calculate specific risk.

In response to the recent financial crisis, the Group of Central Bank Governors and Heads of Supervision has made a series of announcements regarding the new global regulatory framework, which has been referred to as "Basel III," to strengthen the regulation, supervision and risk management of the banking sector. Various Basel III measures are expected to be introduced in phases starting in calendar 2013, including those designed to raise the level of minimum capital requirements and to establish an internationally harmonized leverage ratio and a global minimum liquidity standard. In addition, in July 2011, the Basel Committee on Banking Supervision proposed additional loss absorbency requirements to supplement the common equity Tier I capital requirement ranging from 1% to 2.5% for global systemically important banks, depending on the bank's systemic importance, to be introduced in phases starting in calendar 2016. In November 2011, the Financial Stability Board tentatively identified us as a G-SIFI. Based on the Basel III framework, the Japanese capital ratio framework, which is currently based on Basel II, has been revised to implement the more stringent requirements, which will be effective as of March 31, 2013. Likewise, local banking regulators outside of Japan such as those in the United States are expected to revise the capital and liquidity requirements imposed on our subsidiaries and operations in those countries to implement the more stringent requirements of Basel III as adopted in those countries. We intend to carefully monitor further developments with an aim to enhance our corporate value and maximize shareholder value by integrating the various strengths within the MUFG Group.

Credit Risk Management

Credit risk is the risk of losses due to deterioration in the financial condition of a borrower. We have established risk management systems to maintain asset quality, manage credit risk exposure and achieve earnings commensurate with risk.

Our major banking subsidiaries (which include BTMU and MUTB) apply a uniform credit rating system for asset evaluation and assessment, loan pricing, and quantitative measurement of credit risk. This system also underpins the calculation of capital requirements and management of credit portfolios. We continually seek to upgrade credit portfolio management, or CPM, expertise to achieve an improved risk-adjusted return based on the Group's credit portfolio status and flexible response capability to economic and other external changes.

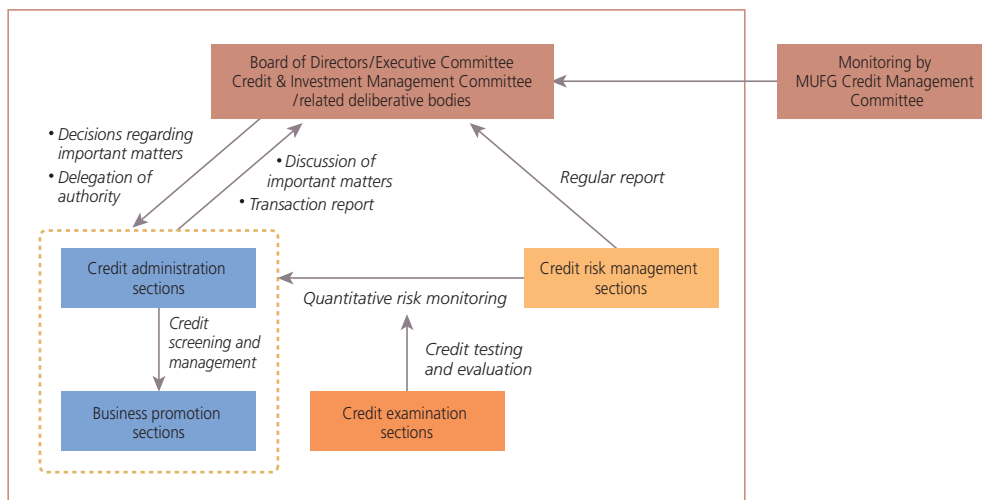

Credit Risk Management System

The credit portfolios of our major banking subsidiaries are monitored and assessed on a regular basis by the holding company to maintain and improve asset quality. A uniform credit rating and asset evaluation and assessment system is used to ensure timely and proper evaluation of all credit risks.

Under our credit risk management system, each of our subsidiaries in the banking, securities, consumer finance, and leasing businesses, manages its respective credit risk on a consolidated basis based on the attributes of the risk, while the holding company oversees and manages credit risk on an overall group-wide basis. The holding company also convenes regular committee meetings to monitor credit risk management at banking subsidiaries and to issue guidance where necessary.

Each major banking subsidiary has in place a system of checks and balances in which a credit administration section that is independent of the business promotion sections screens individual transactions and manages the extension of credit. At the management level, regular meetings of the Credit & Investment Management Committee and related deliberative bodies ensure full discussion of important matters related to credit risk management. Besides such checks and balances and internal oversight systems, credit examination sections also undertake credit testing and evaluation to ensure appropriate credit risk management.

Management System of the Major Banking Subsidiaries

Credit Rating System

MUFG and its major banking subsidiaries use an integrated credit rating system to evaluate credit risk. The credit rating system consists primarily of borrower rating, facility risk rating, structured finance rating and asset securitization rating.

Country risk is also rated on a uniform group-wide basis. Our country risk rating is reviewed periodically to take into account relevant political and economic factors, including foreign currency availability.

Risk exposure for small retail loans, such as residential mortgage loans, is managed by grouping loans into various pools and assigning ratings at the pool level.

Definitions of Borrower Ratings

Borrower Rating	Definition	Borrower category	NPL Classifications under FRL
1	The capacity to meet financial commitments is extremely certain, and the borrower has the highest level of creditworthiness.	Normal	Normal claims
2	The capacity to meet financial commitments is highly certain, but there are some elements that may result in lower creditworthiness in the future.		
3	The capacity to meet financial commitments is sufficiently certain, but there is the possibility that creditworthiness may fall in the long run.		
4	There are no problems concerning the capacity to meet financial commitments, but there is the possibility that creditworthiness may fall in the long run.		
5	There are no problems concerning the capacity to meet financial commitments, and creditworthiness is in the middle range.		
6	There are no problems concerning the capacity to meet financial commitments presently, but there are elements that require attention if the situation changes.		
7	There are no problems concerning the capacity to meet financial commitments presently, but long-term stability is poor.		
8	There are no problems concerning the capacity to meet financial commitments presently, but long-term stability is poor, and creditworthiness is relatively low.		
9	The capacity to meet financial commitments is somewhat poor, and creditworthiness is the lowest among "Normal" customers.		
10-12	Borrowers who must be closely monitored because of the following business performance and financial conditions: (1) Borrowers who have problematic business performance, such as virtually delinquent principal repayment or interest payment; (2) Borrowers whose business performance is unsteady, or who have unfavorable financial conditions; (3) Borrowers who have problems with loan conditions, for whom interest rates have been reduced or shelved.	Close watch	Claims under close observation
10	Although business problems are not serious or their improvement is seen to be remarkable, there are elements of potential concern with respect to the borrower's management, and close monitoring is required.		
11	Business problems are serious, or require long-term solutions. Serious elements concerning business administration of the borrower have emerged, and subsequent debt repayment needs to be monitored closely.		
12	Borrowers who fall under the criteria of Rating 10 or 11 and have "Restructured Loans." Borrowers who have "Loans contractually past due 90 days or more." (As a rule, delinquent borrowers are categorized as "Likely to Become Bankrupt," but the definition here applies to borrowers delinquent for 90 days or more because of inheritance and other special reasons.)	Likely to become bankrupt	Doubtful claims
13	Borrowers who pose a serious risk with respect to debt repayment, loss is likely to occur in the course of transactions. While still not bankrupt, these borrowers are in financial difficulty, with poor progress in achieving restructuring plans, and are likely to become bankrupt in the future.		
14	While not legally bankrupt, borrowers who are considered to be virtually bankrupt because they are in serious financial difficulty and have no prospects for an improvement in their business operations.		
15	Borrowers who are legally bankrupt (i.e., who have no prospects for continued business operations because of non-payment, suspension of business, voluntary liquidation, or filing for legal liquidation).	Bankrupt	

• **Borrower rating**

Our borrower rating classifies borrowers into 15 grades based on evaluations of their expected debt-service capability over the next three to five years.

• **Facility risk rating**

Facility risk rating is used to evaluate and classify the quality of individual credit facilities, including guarantees and collateral. Ratings are assigned by quantitatively measuring the estimated loss rate of a facility in the event of a default.

• **Structured finance rating and asset securitization rating**

Structured finance rating and asset securitization rating are also used to evaluate and classify the quality of individual credit facilities, including guarantees and collateral, and focus on the structure, including the applicable credit period, of each credit facility. In evaluating the debt service potential of a credit facility, we scrutinize its underlying structure to determine the likelihood of the planned future cash flows being achieved.

• **Pool assignment**

Each major banking subsidiary has its own system for pooling and rating small retail loans designed to reflect the risk profile of its loan portfolios.

• **Asset Evaluation and Assessment System**

The asset evaluation and assessment system is used to classify assets held by financial institutions according to the probability of collection and the risk of any impairment in value based on borrower classifications consistent with the borrower ratings and the status of collateral, guarantees, and other factors.

The system is used to conduct write-offs and allocate allowances against credit risk in a timely and adequate manner.

• **Quantitative Analysis of Credit Risk**

MUFG and its major banking subsidiaries manage credit risk by monitoring credit amount and expected losses, and run simulations based on internal models to estimate the maximum amount of credit risk. These models are used for internal management purposes, including loan pricing and measuring economic capital.

When quantifying credit risk amounts using the internal models, MUFG and its major banking subsidiaries consider various parameters, including probability of default, or PD, loss given default, or LGD, and exposure at default, or EAD, used in their borrower ratings, facility risk ratings and pool assignments as well as any credit concentration risk in particular borrower groups or industry sectors. MUFG and its major banking subsidiaries also share credit portfolio data in appropriate cases.

Glossary of terms:

• **PD (Probability of Default)**

The estimated default rate or the probability that the borrower will default. The definition of default is nonperformance in payments of interest or principal in the narrow sense; however, in quantifying credit risk, a wider definition of default is used.

• **LGD (Loss Given Default)**

The percentage loss at time of default, or in other words, the estimated percentage of loss on loan when a borrower defaults due to bankruptcy or other reasons.

• **EAD (Exposure at Default)**

The amount expressed in relevant currency of exposure to loss at time of default, or in other words, the estimated amount of exposure to loss on loan when a borrower defaults due to bankruptcy or other reasons.

Outline of Rating Procedure

• **Corporate exposures**

Corporate exposures which are managed on a case-by-case basis using borrower rating and other methods consist of the following exposures.

Corporate Exposure Categories

<i>Asset class under Basel II</i>	<i>Details</i>
Corporate exposures	Include exposures to corporates on which borrower rating is assigned and retail business exposures.
Specialized lending	Exposures related to structured finance, including project finance, object finance, real estate finance, and others.
Exposures for eligible purchased corporate receivables	Exposures for eligible purchased corporate receivables include pools of small claims among securitized account receivables, leasing receivables or other receivables for which individual assessment is inappropriate. In some cases, these pools become underlying assets of securitization exposures related to the asset-backed commercial paper (ABCP) programme sponsor business.
Sovereign exposures	In addition to exposures to central government and central bank, sovereign exposures include exposure to local public authorities, land development public corporations, regional housing supply corporations, and regional road corporations.
Bank exposures	Bank exposures include total credit exposures including off-balance sheet transactions.

Equity Exposures under PD/LGD Approach

Equity exposures under PD/LGD approach	Includes strategic equity investments. Such investments made before the end of September 2004 are excluded from this category because of the grandfathering provisions stipulated in the FSA Notification on Basel II.
--	--

Borrower rating is assigned to these exposures by taking into consideration quantitative financial analysis, various risk adjustments, evaluation of business group, and external indexes and information.

In estimating an individual PD of each borrower rating, internal data regarding actual default records for each borrower rating are used. For the purpose of calculating capital requirements, measuring economic capital and loan pricing, PD is estimated with default defined as borrower rating 12 to 15 and any disposal that generates material economic loss. For the purpose of other internal risk management, including conducting write-offs and allocating allowances based on asset evaluation and assessments, PD is estimated with default defined as borrower rating 13 to 15.

When assigning a structured finance rating to specialized lending, similar procedures are followed in adjusting for various risks after conducting quantitative financial analysis. In calculating capital requirements, ratings for certain real estate finance and object finance are mapped to supervisory slotting criteria; PD estimation is not used.

For eligible purchased corporate receivables, PD is estimated using external information and other factors. Evaluation of the external data with regard to explanation capability to default rates and other factors is conducted to ensure conservativeness.

For corporate exposures under the PD/LGD approach, facility ratings are assigned based on loan recoverability, taking into account factors specific to each loan (guarantees/collateral, etc.). LGD, which is estimated for each individual facility rating, is determined based on internal data concerning the actual loss record of default exposures, taking into account the recessionary period.

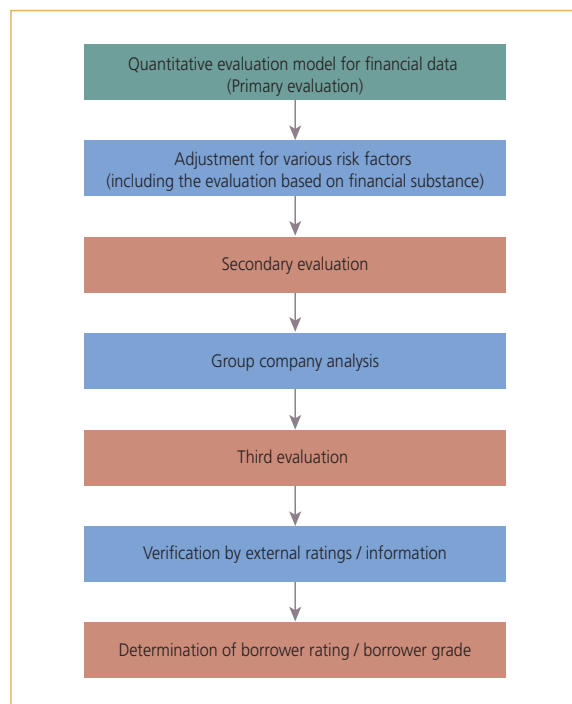

Furthermore, for undrawn commitments under off balance sheet exposures, EAD is estimated based on internal data regarding the amount drawn at the time of default.

Glossary of terms:

• **PD/LGD approach**

A method of calculating capital requirements from estimation of both probability of default and loss given default. Other methods used to calculate capital requirements include the Market-Based Approach, which uses stock price volatility.

Example of Borrower Rating Assignment Process

Retail Exposure Categories

<i>Categories under Basel II</i>	<i>Details</i>
Residential mortgage exposures	Include retail housing loans to individuals living in residential real estate to purchase the real estate
Qualifying revolving retail exposures	Include individual card loans that fulfill certain requirements
Other retail exposures	Include non-business related loans to individuals other than residential mortgage and qualifying revolving retail exposures, and small business exposures being managed in pools instead of by borrower rating

• **Retail exposures**

Retail exposures being managed based on pool are comprised of the exposures shown in the above table. In the pool assignment system, the exposures are first divided into pools by product type and then the pools are partitioned after analyzing delinquency status, transaction risk characteristics and borrower risk characteristics.

In estimating parameters such as PDs, internal data with regard to actual default result of each pool classification are used (where default is defined as claims more than 3 months in arrears, the borrower category of close observation or below, or repayment by subrogation).

Quantitative Analysis of Credit Risk

MUFG and its major banking subsidiaries manage credit risk by monitoring credit amount and expected losses, and run simulations based on internal models to estimate the maximum amount of credit risk. These models are used for internal management purposes, including loan pricing and measuring economic capital.

When quantifying credit risk amounts using the internal models, MUFG and its major banking subsidiaries consider various parameters, including probability of default, or PD, loss given default, or LGD, and exposure at default, or EAD, used in their borrower ratings, facility risk ratings and pool assignments as well as any credit concentration risk in particular borrower groups or industry sectors. MUFG and its major banking subsidiaries also share credit portfolio data in appropriate cases.

In calculating regulatory capital requirements under the Basel II framework, as with quantification of credit risk amounts for internal risk management, MUFG and its major banking subsidiaries basically use PD, LGD and EAD applicable to borrower rating, facility risk rating and pool assignment based on the AIRB Approach. (However, in calculating capital requirements based on the Standardized Approach as an exemption to the IRB Approach, a risk weight of 100% is used for corporate exposures continuously and uniformly while risk weights for bank and sovereign exposures are determined using external ratings of the rating agency R&I for domestic exposures and those of S&P for overseas exposures.)

Loan Portfolio Management

We aim to achieve and maintain levels of earnings commensurate with credit risk exposure. Products are priced to take into account expected losses, based on the internal credit ratings.

We assess and monitor loan amounts and credit exposure by credit rating, industry and region. Portfolios are appropriately managed to limit concentrations of risk in specific categories by establishing Large Credit Guidelines.

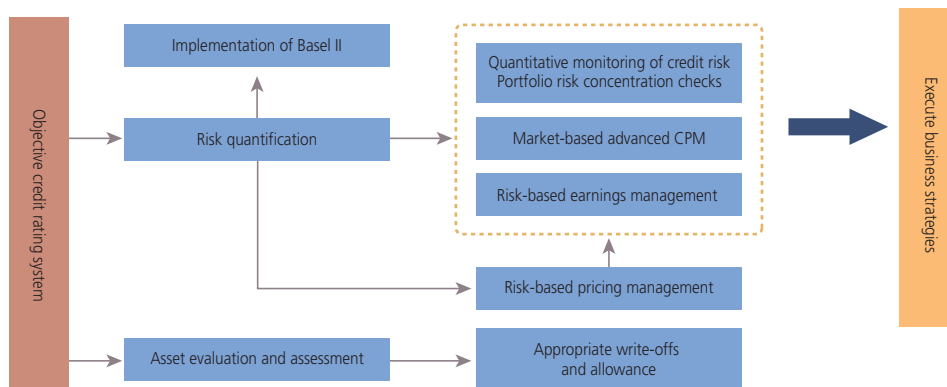

To manage country risk, we have established specific credit ceilings by country. These ceilings are reviewed when there is any material change in a country's credit standing, in addition to regular review.

Continuous CPM Improvement

With the prevalence of securitized products and credit derivatives in global markets, we seek to supplement conventional CPM techniques with advanced methods based on the use of such market-based instruments.

Through credit risk quantification and portfolio management, we aim to improve the risk return profile of the Group's credit portfolio, using financial markets to rebalance credit portfolios in a dynamic and active manner based on an accurate assessment of credit risk.

Credit Portfolio Management (CPM) Framework

Securitization Exposures

For the purposes of its portfolio management, MUFG securitizes portions of its loans and other assets. In addition, MUFG acts as an originator of securitization transactions in its Asset-Backed Commercial Paper (ABCP) sponsor business. Moreover, some of the securitization exposure that MUFG holds as an investor includes asset-backed securities.

Against the backdrop of the growing diversification in securitization and other factors, MUFG uses a variety of methods to quantify credit risk of the securitization exposures internally, such as a method based on rating combining the credit risk of the underlying assets and the transferor risk, a method focusing on the price volatility of the credit exposures, and a method based on the approach established in Basel II.

In calculating regulatory capital requirements for credit risk, MUFG uses both “the Ratings-Based Approach (RBA)” and “the Supervisory Formula (SF).” Where the securitization exposures are rated by qualified rating agency, MUFG uses RBA. Where external ratings are not available, MUFG uses the SF stipulated in the FSA Notification. In calculating capital requirements under the RBA, MUFG refers to the ratings of S&P, Moody’s, Fitch, R&I, and JCR.

In calculating regulatory capital requirements for market risk, MUFG uses both the “Internal Models Approach,” where the MUFG Group’s market risk measurement model is adopted for calculations, and the “Standardized Method,” where calculation methods stipulated in the FSA Notification are adopted.

The risk profiles of securitization exposures vary widely depending on involvement in schemes and the type and structure of underlying assets. In addition, the risk profile is more complex for re-securitization exposures because the underlying assets have a multi-level structure. In regard to the management of securitization exposures, MUFG strives for monitoring of conditions through various methods, including establishing a monitoring system for such risk profiles and performance based on management rules, etc., as well as regularly confirming information requiring monitoring.

MUFG holds securitized loans and other assets, as well as securitized products as a sponsor of ABCP programs, which are acquired from external investors, in principle. Normally, MUFG Group companies do not acquire such products directly from the originators.

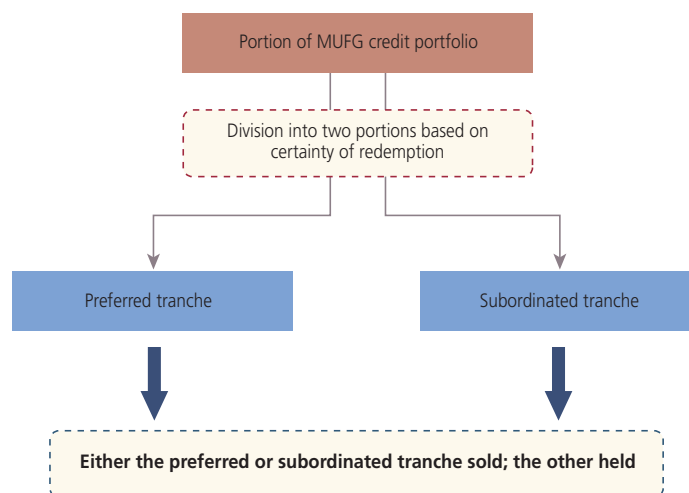

• **Securitization of loans and other assets held by MUFG**

MUFG securitizes some of its loans and other assets to transfer long-term interest rate risk on residential mortgage loans, and to transfer credit risk in its corporate loan portfolio.

Because the sections carrying out these types of transactions within MUFG are limited, the credit risk management sections directly collaborate with these sections to calculate the capital requirements.

As a credit risk control technique, the importance of securitization is growing. However, at this time, credit derivatives and guarantees account for a greater proportion of credit risk transfer transactions than securitization.

Example of Securitization of Loan Assets

• **ABCP sponsor**

MUFG serves as a sponsor of an ABCP conduit or similar asset securitization programme to offer solutions to its customers in order to utilize the customers’ account receivables, note receivables and various types of assets.

Under such programmes, customers’ account receivables, note receivables and other assets are transferred to a special purpose company (SPC) established in advance. The SPC then procures funds by issuing commercial paper backed by the transferred assets. A typical transaction involves separating the transferred assets into preferred and subordinated tranches. An ABCP is issued using only the preferred tranche as the underlying assets.

In cases where MUFG provides a liquidity support facility to the SPC which issues the ABCP, MUFG calculates regulatory capital requirements by treating the facility as an off-balance sheet transaction.

• **Asset-backed securities investment**

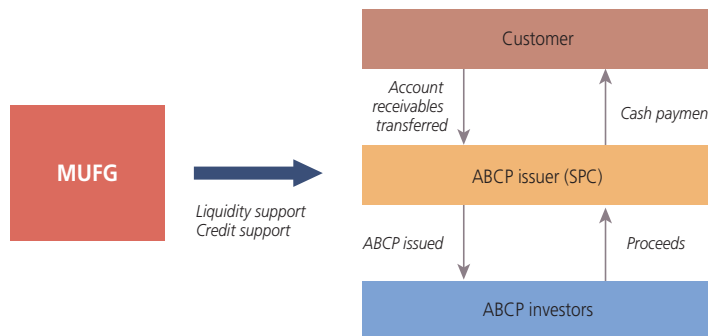

MUFG holds some asset-backed securities for investment purposes.

MUFG manages this type of transaction within the same framework as other securities investment and calculates the capital requirements accordingly.

• **Accounting policy for securitization activities**

MUFG complies with Accounting Standard Board of Japan Statement No. 10, Accounting Standard for Financial Instruments (Business Accounting Council, January 22, 1999) in recognizing, evaluating, and booking the occurrence or extinguishment of financial assets or liabilities related to securitization transactions.

Example of ABCP Sponsor Business

Derivatives and Long Settlement Transactions, and Credit Risk Mitigation Techniques (Collateral and guarantees)

While loan exposures are the main portion of the credit portfolio to be managed, a counterparty credit risk arising from derivatives and long settlement transactions (hereafter "derivatives transactions") is also included in the portfolio. In addition, when quantifying credit risk internally, MUFG takes into consideration an effect of credit risk mitigation (CRM) provided by collateral or guarantees.

1. Derivatives

Because counterparty credit risk of derivatives transactions generally can vary over time with the movement of underlying market factors, MUFG calculates exposures to counterparty credit risk by adding increases in future potential exposure to the balance of present exposure. Counterparty credit risk is not just recognized when calculating capital requirements, but significant exposures to counterparty credit risk are also managed in the same manner as loan exposures through allocation of capital for credit risk and setting limits for the purpose of internal risk management.

In addition, the establishment of collateral-based security and reserves for derivative transactions is, in principle, treated in the same manner as for loans.

Among generally used derivatives contracts, there are some contracts that provide for the requirement of additional collateral in the event that the credit capabilities of MUFG should deteriorate, and therefore, are a potential source of increased exposures.

2. Credit Risk Mitigation Techniques (Collateral, guarantees, and credit derivatives)

When quantifying credit risk and calculating capital requirements based on the AIRB Approach, MUFG basically takes into account the CRM effects of collateral, guarantees and credit derivatives using a method based on the amounts recovered in association with default exposures.

When using the Standardized Approach to calculate capital requirements, MUFG takes into consideration the effect of CRM techniques. Among these techniques are eligible financial collateral as typified by deposit collateral in our banks, or guarantees and credit derivatives.

The method for taking into account CRM effects based on the IRB Approach is tied to the internal risk management system. For example, through assessing real estate value accurately, MUFG endeavors to increase the sophistication of its internal risk management systems and use its advanced internal risk management systems in the calculation of capital requirements.

MUFG has a diversity of guarantors, such as local public authorities, credit guarantee corporations, financial institutions, and corporates, but its counterparties in credit derivative transactions are primarily financial institutions. When calculating capital requirements, guarantees and credit derivatives for which CRM effects are taken into account are limited to counterparties to whom MUFG continuously assigns borrower ratings and monitors creditworthiness.

With loans, MUFG mainly uses guarantees by Credit Guarantee Corporations or real estate collateral as CRM techniques. At this point of time, the use of CRM techniques has not led to excessive concentration of credit or market risk.

Other credit risk mitigation techniques

When calculating capital requirements for corporate exposures applicable to the AIRB Approach or exposures applicable to the Standardized Approach, MUFG recognizes the effect of on-balance netting of loans and deposits. For exposures applicable to the AIRB Approach, deposits eligible for the netting process are limited to call money.

For derivatives, such as interest rate swaps and currency options, and repo-style transactions with legally enforceable netting agreements, the CRM effects are taken into account when calculating capital requirements.

In addition, for collateralized derivatives (transactions based on CSA agreements), the CRM effects are also taken into account when calculating capital requirements.

Risk Management of Strategic Equity Portfolio

Strategic equity investment risk is the risk of loss caused by a decline in the prices of our equity investments. We hold shares of various corporate clients for strategic purposes, in particular to maintain long-term relationships with these clients. These investments have the potential to increase business revenue and appreciate in value. At the same time, we are exposed to the risk of price fluctuation in the Japanese stock market. For that reason, in recent years, it has been a high priority for us to reduce our equity portfolio to limit the risks associated with holding a large equity portfolio, but also to comply with a regulatory framework that prohibits Japanese banks from holding an amount of shares in excess of their adjusted Tier I capital after September 2006.

We use quantitative analysis to manage the risks associated with the portfolio of equities held for strategic purposes. According to internal calculations, the market value of our strategically held (Tokyo Stock Exchange-listed) stocks (excluding foreign stock exchange-listed stocks) as of March 31, 2012 was subject to a variation of approximately ¥3.9 billion when the TOPIX index moves one point in either direction.

We seek to manage and reduce strategic equity portfolio risk based on such types of simulation. The aim is to keep this risk at appropriate levels compared with Tier 1 capital while generating returns commensurate with the degree of risk exposure.

On the other hand, shares of subsidiaries and affiliate companies are valued periodically on the basis of net asset value for risk management purposes.

Market Risk Management

Market risk is the risk that the value of our assets and liabilities could be adversely affected by changes in market variables such as interest rates, securities prices, or foreign exchange rates.

Management of market risk at MUFG aims to control related risk exposure across the Group while ensuring that earnings are commensurate with levels of risk.

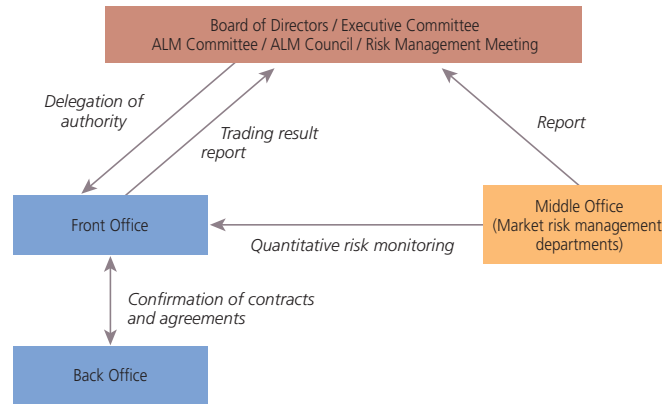

Market Risk Management System

We have adopted an integrated system to manage market risk from our trading and non-trading activities. The holding company monitors Groupwide market risk, while each of the major subsidiaries manages its market risks on a consolidated and global basis.

At each of the major subsidiaries, checks and balances are maintained through each system in which back and middle offices operate independently from front offices. In addition, separate Asset-Liability Management, or ALM, Committee, ALM Council and Risk Management Meetings are held at each of the major subsidiaries every month to deliberate important matters related to market risk and control.

The holding company and the major subsidiaries allocate economic capital commensurate with levels of market risk and determined within the scope of their capital bases. The major subsidiaries have established quantitative limits relating to market risk based on their allocated economic capital. In addition, in order to keep losses within predetermined limits, the major subsidiaries have also set limits for the maximum amount of losses arising from market activities.

Management System of Our Major Subsidiaries

Market Risk Management and Control

At the holding company and the major subsidiaries, market risk exposure is reported to the Chief Risk Management Officers on a daily basis. At the holding company, the Chief Risk Management Officer monitors market risk exposure across the Group as well as the major subsidiaries' control over their quantitative limits of market risk and losses. Meanwhile, the Chief Risk Management Officers at the major subsidiaries monitor their own market risk exposure and their control over their quantitative limits of market risk and losses. In addition, various analyses on risk profiles, including stress testing, are conducted and reported to the Executive Committees and the Corporate Risk Management Committees on a regular basis. At the business unit levels in the major subsidiaries, the market risks on their monetary assets and liabilities, such as interest rate risk and foreign exchange rate risk, are controlled by various hedging transactions using future contracts and derivative contracts.

These market risk management activities are performed in accordance with the predetermined rules and procedures. Risk Management Officers regularly verify the appropriateness of the management controls over these activities and the risk evaluation models adopted.

Market Risk Measurement Model

Market risks consist of general risks and specific risks. General market risks result from changes in entire markets, while specific risks relate to changes in the prices of unique stocks and bonds which are independent of the overall direction of the market.

To measure market risks, MUFG uses the VaR method which estimates changes in the market value of portfolios within a certain period by statistically analyzing past market data. Since the daily variation in market risk is significantly greater than that in other types of risk, MUFG measures and manages market risk using VaR on a daily basis.

Market risk of trading and non-trading activities is measured by using a unified market risk measurement model. The principal model used for these activities is historical simulation (HS) model (holding period, 10 business days; confidence interval, 99%; and observation period, 701 business days). The HS model calculates VaR amounts by estimating the profit and loss on the current portfolio under the actual fluctuations in the market rates and prices over the fixed period in the past. This method is designed to capture certain statistically infrequent movements, such as a fat tail, and accounts for the characteristics of financial instruments with non-linear measurement. The holding company and the major subsidiaries use the HS model to calculate Basel II regulatory capital adequacy ratios.

In calculating VaR by using the HS method, we have implemented an integrated market risk measurement system throughout the Group. Our major subsidiaries calculate their VaR based on the risk and market data prepared by systems of their front offices and other departments. The major subsidiaries provide this risk data to the holding company, which calculates overall VaR, taking into account the diversification effect among all portfolios of the major subsidiaries.

For the purpose of internally evaluating capital adequacy on an economic capital basis in terms of market risk, we use this market risk measurement model to calculate risk amounts based on a holding period of one year and a confidence interval of 99%. (Effective April 2012, a confidence interval of 99.9% was adopted to replace the previous interval of 99%.)

Monitoring and managing our sensitivity to interest rate fluctuations is the key of managing market risk in MUFG's non-trading activities. The major subsidiaries take the following approach to measure some risks concerning core deposits, loan prepayments and early deposit withdrawals.

To measure interest rate risk relating to deposits without contract-based fixed maturities, the amount of "core deposits" is calculated through a statistical analysis based on deposit balance trend data and the outlook for interest rates on deposits, business decisions, and other factors. The amount of "core deposit" is categorized into various groups of maturity terms of up to five years (2.5 years on average) to recognize interest rate risk. The calculation assumptions and methods to determine the amount of core deposits and maturity term categorization are regularly reviewed.

Meanwhile, deposits and loans with contract-based maturities are sometimes cancelled or repaid before their maturity dates. To measure interest rate risk for these deposits and loans, we reflect these early termination events mainly by applying early termination rates calculated based on a statistical analysis of historical repayment and cancellation data together with historical market interest rate data.

Summaries of Market Risks (Fiscal Year Ended March 31, 2012)

• **Trading activities**

The aggregate VaR for our total trading activities as of March 31, 2012 was ¥6.37 billion, comprising interest rate risk exposure of ¥6.79 billion, foreign exchange risk exposure of ¥0.82 billion, and equity-related risk exposure of ¥0.13 billion. Compared with the VaR as of March 31, 2011, we experienced a decrease in market risk during the fiscal year ended March 31, 2012, primarily due to a decrease in yen interest rate risk.

Our average daily VaR for the fiscal year ended March 31, 2012 was ¥12.62 billion. Based on a simple sum of figures across market risk categories, interest rate risk accounted for approximately 68%, foreign exchange risk for approximately 26% and equity-related risk for approximately 4%, of our total trading activity market risks.

Due to the nature of trading operations which involves frequent changes in trading positions, market risk varied substantially during the fiscal year, depending on our trading positions.

VaR for Trading Activities

	April 1, 2010~March 31, 2011				April 1, 2011~March 31, 2012			
	Average	Maximum*	Minimum*	Mar 31, 2011	Average	Maximum*	Minimum*	Mar 31, 2012
Overall	¥16.07	¥25.22	¥12.15	¥18.17	¥12.62	¥22.46	¥6.37	¥6.37
Interest rate	15.54	20.15	12.36	20.15	12.71	19.23	6.79	6.79
Yen	8.46	13.51	5.27	11.32	5.92	9.48	3.23	3.54
U.S. dollars	8.49	11.78	5.97	9.01	6.70	10.44	2.06	2.23
Foreign exchange	6.75	16.89	0.29	3.81	4.79	14.11	0.76	0.82
Equities	1.56	3.62	0.27	0.51	0.81	2.43	0.13	0.13
Commodities	0.57	1.28	0.22	0.59	0.43	1.43	0.15	0.29
Less diversification effect	(8.35)	—	—	(6.89)	(6.12)	—	—	(1.66)

Assumptions for VaR calculations:

- Historical simulation method
- Holding period: 10 business days
- Confidence interval: 99%
- Observation period: 701 business days

* The maximum and minimum VaR overall and for various risk categories were taken from different days.

• **Non-trading Activities**

The aggregate VaR for our total non-trading activities as of March 31, 2012, excluding market risks related to our strategic equity portfolio and measured using the same standards as trading activities, was ¥471.3 billion. Market risks related to interest rates equaled ¥453.3 billion and equities-related risks equaled ¥79.2 billion. Compared with the VaR for MUFG at March 31, 2011, the decrease in the overall market risk was ¥88.6 billion. Market risks related to interest rates decreased ¥70.8 billion. Equity related risks decreased ¥80.1 billion.

Based on a simple sum of figures across market risk categories, interest rate risks accounted for approximately 85% of our total non-trading activity market risks. Looking at a breakdown of interest rate related risk by currency, at March 31, 2012, the yen accounted for approximately 34% while the US dollar accounted for approximately 56%.

The following tables set forth the VaR related to our trading activities by risk category for the periods indicated:

VaR for Non-trading Activities

	April 1, 2010–March 31, 2011				April 1, 2011–March 31, 2012			
	Average	Maximum*	Minimum*	Mar 31, 2011	Average	Maximum*	Minimum*	Mar 31, 2012
Interest rate	¥514.6	¥607.6	¥424.9	¥524.1	¥472.5	¥546.3	¥386.3	¥453.3
Yen	235.8	274.1	179.1	257.5	209.2	262.4	159.4	191.2
U.S. dollars	326.7	422.2	259.3	324.2	323.4	376.3	268.0	311.5
Euro	62.5	78.5	39.2	48.5	42.3	61.6	25.2	54.5
Equities	138.3	187.4	89.9	159.3				
Foreign exchange	0.1	0.8	0.0	0.0	0.2	1.3	0.0	0.1
Total	541.7	629.7	451.1	559.9	505.5	572.2	415.7	471.3

Assumptions for VaR calculations:

- Historical simulation method
- Holding period: 10 business days
- Confidence interval: 99%
- Observation period: 701 business days

* The maximum and minimum VaR overall for each category and in total were taken from different days. The equities-related risk figures do not include market risk exposure from our strategic equity portfolio.

• **Outlier ratio**

To monitor interest rate risk in its banking activities in accordance with the Second Pillar of the Basel II Framework, MUFG measures the “outlier ratio” of the holding company as well as of the two major banking subsidiaries. At March 31, 2012, the outlier ratios of the holding company, BTMU and MUTB were all less than 20%.

Outlier Ratio	Mar 31, 2011	Mar 31, 2012
MUFG	12.37%	9.49%
Bank of Tokyo-Mitsubishi UFJ	12.05%	10.75%
Mitsubishi UFJ Trust and Banking	18.03%	6.03%

Assumptions for outlier ratio calculations:

Measurement method: Interest rate sensitivity method
 Interest rate shock range: 1st and 99th percentile of observed interest changes using one-year holding period and five-year observation period

Glossary of terms:

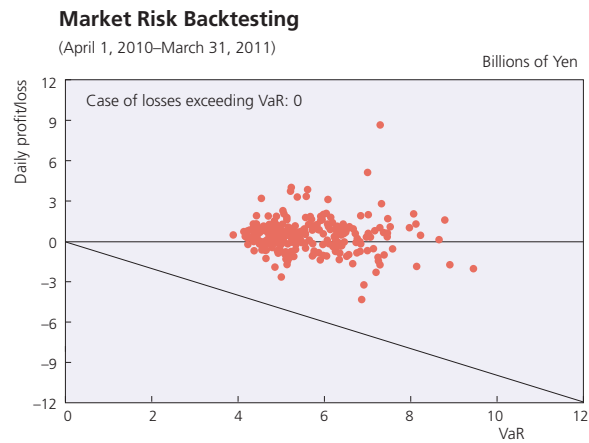

• **Outlier ratio**

The Second Pillar of the Basel II Framework introduced a new “outlier bank” criterion to control interest rate risk in the banking book, of which most of the products held are not measured at fair value. As part of measuring interest rate risk in the banking book, MUFG and the major banking subsidiaries monitor the “outlier ratio,” the ratio of expected losses resulting from an interest rate shock in a certain range to capital. The capital is broadly defined as the sum of Tier 1 + Tier 2 capital. In case an outlier ratio for a bank exceeds 20%, the FSA, as part of its early warning framework, will conduct a preliminary interview with the bank to determine the appropriateness of bank’s risk management and its improvement measures, if any. However, an outlier ratio of over 20% does not necessarily mean that a management improvement order is immediately issued by the FSA.

Backtesting

We conduct backtesting in which a VaR is compared with actual realized and unrealized losses on a daily basis to verify the accuracy of our VaR measurement model. We also conduct additional backtesting using other methods, including testing VaR against hypothetical losses and testing VaR by various changing parameters such as confidence intervals and observation periods used in the model.

Actual losses exceeded VaR one time in the fiscal year ended March 31, 2012. This means that our VaR model provided reasonably accurate measurements of market risk during the fiscal year.

Stress Testing

We have adopted an HS-VaR model, which calculates a VaR as a statistically possible amount of losses in a fixed confidence interval based on historical market volatility. However, the HS-VaR model is not covered to capture certain abnormal market fluctuations. In order to complement this weakness of the model, MUFG conducts portfolio stress testing to measure potential losses using a variety of scenarios.

The holding company and the major subsidiaries conduct stress testing on a daily, monthly and quarterly basis to monitor their overall portfolio risk by applying various scenarios. For example, daily stress testing at the holding company estimates maximum potential losses in each market on the current trading portfolio based on the worst ten-day historical volatility recorded during the VaR observation period of 701 days.

In light of increased market volatility since the second half of calendar 2007, we have implemented additional tests under various stress scenarios to reinforce the VaR and are applying the test results to risk management.

Liquidity Risk Management

Liquidity risk is the risk of incurring losses if a poor financial position hampers the ability to meet funding requirements, or necessitates fund procurement at interest rates markedly higher than normal.

Our major subsidiaries maintain appropriate liquidity in both Japanese yen and foreign currencies by managing their funding sources and mechanism, such as liquidity gap, liquidity-supplying products such as commitment lines, and buffer assets.

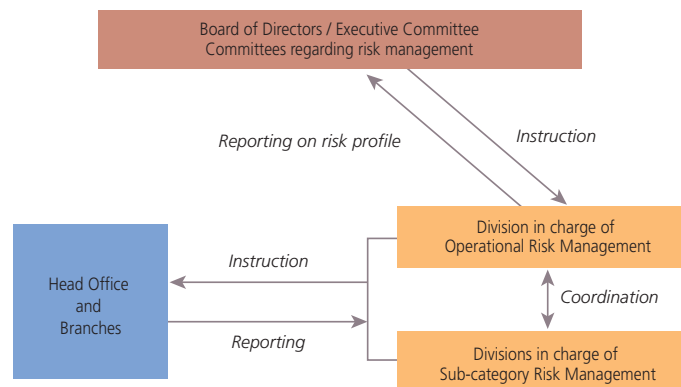

We have established a Groupwide system for managing liquidity risk by categorizing the risk in the following three stages: Normal, With-Concern, and Critical. The front offices and risk management offices of the major subsidiaries and the holding company exchange information and data on liquidity risk even at the Normal stage. At higher alert stages, we centralize information about liquidity risk and discuss issues relating to Groupwide liquidity control actions among group companies, if necessary. We have also established a system for liaison and consultation on funding in preparation for contingency, such as natural disasters, wars and terrorist attacks. The holding company and the major subsidiaries conduct Groupwide contingency preparedness drills on a regular basis to ensure smooth implementation in the event of an emergency.

Operational Risk Management

Operational risk refers to the risk of loss caused by either internal control issues, such as inadequate operational processes or misconduct, system failures, or external factors such as serious political instability, major terrorist activity, health epidemics and natural disasters. The term includes a broad range of risks that could lead to losses, including operations risk, information asset risk, reputation risk, legal risk, and tangible asset risk. These risks that comprise operational risk are referred to as sub-category risks.

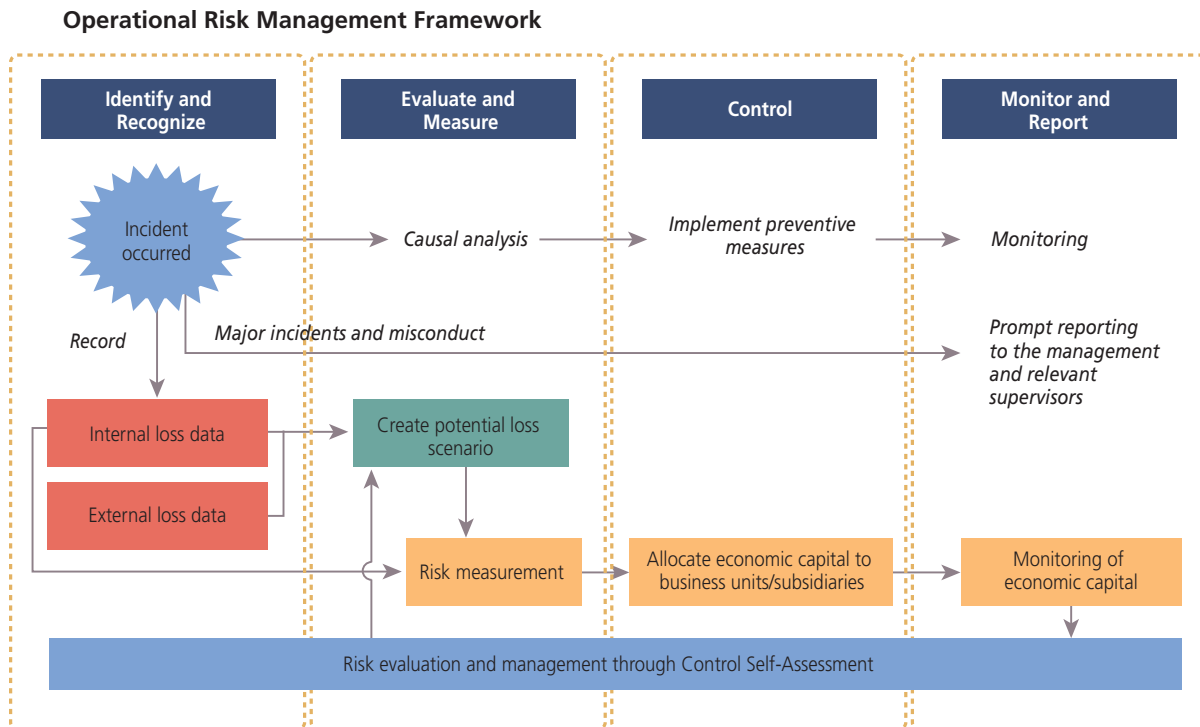

MUFG’s board of directors has approved the MUFG Operational Risk Management Policy as a group-wide policy for managing operational risk. This policy sets forth the core principles regarding operational risk management, including the definition of operational risk, and the risk management system and processes. The policy also requires the board of directors and the Executive Committee to formulate fundamental principles of operational risk management and establish and maintain an appropriate risk management system. The Chief Risk Management Officer is responsible for recognizing, evaluating, and appropriately managing operational risk in accordance with the fundamental principles formulated by the board of directors and the Executive Committee. A division in charge of operational risk management must be established that is independent of business promotion sections to manage overall operational risk in a comprehensive manner. These fundamental principles have also been approved by the boards of directors of the major subsidiaries, providing a consistent framework for operational risk management of the Group.

Operational Risk Management System of Our Major Banking Subsidiaries

As set forth in the following diagram, we have established a risk management framework for loss data collection, control self assessment, or CSA, and measurement of operational risk in order to appropriately identify, recognize, evaluate, measure, control, monitor and report operational risk.

We have also established group-wide reporting guidelines with respect to loss data collection and its monitoring. We focus our efforts on ensuring accurate assessment of the status of operational risk losses and the implementation of appropriate countermeasures, while maintaining databases of internal and external loss events.

Operations Risk Management

Operations risk refers to the risk of loss that is attributable to the actions of executives or employees, whether accidental or the result of neglect or deliberate misconduct. The Group companies offer a wide range of financial services, ranging from commercial banking products such as deposits, exchange services and loans to trust and related services covering pensions, securities, real estate and securitization, as well as transfer agent services. Cognizant of the potentially significant impact that operations risk-related events could have in terms of both economic losses and damage to our reputation, our banking subsidiaries continue to improve their management systems to create and apply appropriate operations risk-related controls.

Specific ongoing measures to reduce operations risk include the development of databases to manage, analyze and prevent the recurrence of related loss events; efforts to tighten controls over administrative procedures and related operating authority, while striving to improve human resources management; investments in systems to improve the efficiency of administrative operations; and programs to expand and upgrade internal auditing and operational guidance systems.

Senior management receives regular reports on the status of our businesses from an operations risk management perspective. We work to promote the sharing within the Group of information and expertise concerning any operational incidents and the measures implemented to prevent any recurrence.

Efforts to upgrade the management of operations risk continue with the aim of providing our customers with a variety of high-quality services.

Information Asset Risk Management

Information asset risk refers to the risk of loss caused by loss, alteration, falsification or leakage of information, or by destruction, disruption, errors or misuse of information systems, as well as risks similar to this risk. In order to ensure proper handling of information and prevent loss or leakage of information, our major banking subsidiaries strive to better manage and reduce such risks through the appointment of managers with specific responsibilities for information security issues, the establishment of internal procedures, training courses designed for all staff, and the implementation of measures to ensure stable IT systems control. We have also formulated the Personal Information Protection Policy as the basis for ongoing programs to protect the confidentiality of personal information.

Systems planning, development and operations include appropriate design and extensive testing phases to ensure that systems are designed to help prevent failures while providing sufficient safeguards for the security of personal information. The status of the development of any mission-critical IT systems is reported regularly to senior management. We have developed disaster countermeasures systems and have also been investing in duplication of the Group's IT infrastructure to minimize damage in the event of any system failure. Emergency drills are conducted to help increase staff preparedness.

With the aim of preventing any recurrence, we also work to promote sharing of information within the Group related to the causes of any loss or leakage of information, or system failure.

Reputation Risk Management

Reputation risk refers to the risk of loss due to deterioration in reputation as a consequence of the spread of rumors among customers or in the market, or as a consequence of our inadequate response to particular situations, as well as risks similar to this risk.

We recognize the potentially significant impact reputation risk-related events can have on the management and execution of the Group's businesses, which in turn can result in economic losses to, or diminished market confidence in, the Group. Accordingly, we continue to improve our risk control framework designed to appropriately manage such risk.

Specifically, in order to manage our reputation risk effectively on a group-wide basis, we have established a risk management system designed to ensure mutual consultation and reporting if a reputation risk-related event occurs or is anticipated and, through this system, share relevant information within the Group.

Through the risk control framework and risk management system, we seek to minimize damage to the reputation and credibility of, and the market confidence in, the Group by promptly obtaining an accurate understanding of relevant facts relating to reputation risk-related events and disclosing information concerning the events and the measures we take in response to such events in an appropriate and timely manner.

Risk Management for Other Risks

In addition to the risks discussed above, the MUFG Group companies define and manage sub-category risks as appropriate, including tangible asset risk, personnel risk and legal risk as set forth in the "Operational Risk Management System of Our Major Banking Subsidiaries" diagram above.

Basel II Regulatory Capital Requirements for Operational Risk

(1) Adoption of the Advanced Measurement Approach (AMA)

We have been implementing the AMA since March 31, 2012, in place of the Standardized Approach that we had been using previously, for calculation of the operational risk equivalent amount in connection with measuring capital adequacy ratios based on Basel II. We use, however, the Basic Indicator Approach, or BIA, for entities that are deemed to be less important in the calculation of the operational risk equivalent amount and for entities that are still preparing to implement the AMA.

(2) Outline of AMA

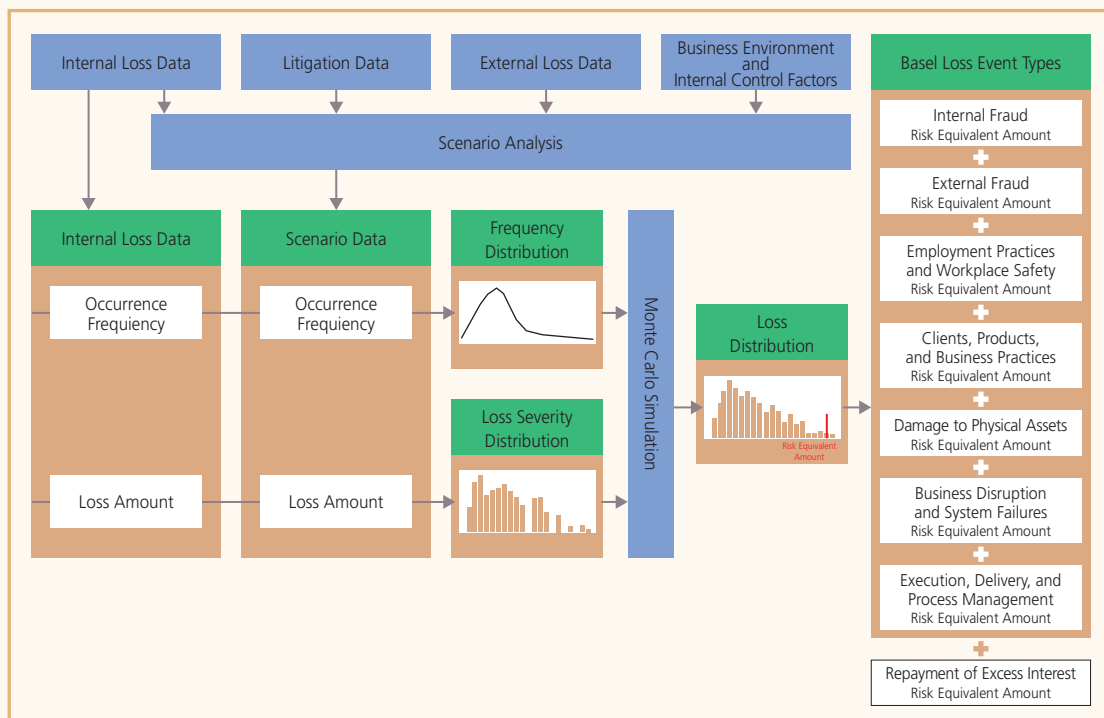

We have established a measurement model designed to account for four data elements—internal loss data, external loss data, scenario analysis, and business environment and internal control factors, or BEICFs—and calculate the operational risk equivalent amount by estimating the maximum loss using a 99.9th percentile one-tailed confidence interval and a one-year holding period.

In calculating the operational risk equivalent amount, we exclude expected losses relating to the amount of allowance for repayment of excess interest associated with the consumer finance business of a subsidiary. We do not exclude any other expected losses and do not reflect the risk mitigating impact of insurance. In addition, we take into account credit risk-related events that are not reflected in the measurement of the credit risk equivalent amount.

(3) Outline of Measurement Model

Our operational risk equivalent amount measured under the AMA is a simple sum of the amounts calculated separately for BTMU on a consolidated basis, MUTB on a consolidated basis, and the total amount for other Group companies (including the holding company, MUSHD and Mitsubishi UFJ NICOS). For each of BTMU and MUTB on consolidated basis, the operational risk equivalent amount is a simple sum of the amounts calculated based on the seven loss event types defined by Basel II. For other Group companies, the operational risk equivalent amount is a simple sum of the amounts calculated based on eight loss event types consisting of the seven loss event types defined by Basel II and an additional loss event type representing losses relating to repayment of excess interest associated with the consumer finance business of a subsidiary. We do not reflect the correlation effects among the loss event types in the calculation of our operational risk equivalent amount.

Outline of Measurement Model

The risk equivalent amount for each loss event type represents the amount of maximum loss estimated with a 99.9th percentile one-tailed confidence interval and a one-year holding period based on the distribution of losses arising from all relevant risk events for a one-year period (Loss Distribution). A Loss Distribution combines a Frequency Distribution (through which the frequency of occurrence of risk events is expressed) and a Loss Severity Distribution (through which the amounts of losses resulting from risk events are expressed) through Monte Carlo simulations. The data used for this purpose include internal loss data and scenario data. Scenario data are generated through a scenario analysis. External data and BEICFs are taken into account in the scenario analysis and reflected in scenario data. The Frequency Distribution is derived from the occurrence frequency information in internal loss data and scenario data expressed through a Poisson Distribution. The Loss Severity Distribution is derived from the amount information in internal loss data and scenario data expressed in a non-parametric manner (where no underlying distribution is assumed).

With respect to the risk of losses relating to repayment of excess interest associated with the consumer finance business of a subsidiary, the risk equivalent amount represents the amount of maximum loss estimated with a 99.9th percentile one-tailed confidence interval and a one-year holding period based on a normal distribution assumed by applying data on losses that arose in a given period, excluding any related expected losses.

We confirm the appropriateness of the measurement models by periodic verification and back testing.

(4) Outline of Scenario Analysis

As an initial step of our scenario analysis, we identify potential severe loss events that we have not experienced but may potentially experience in the future. In this identification process, we seek to ensure exhaustive coverage of potential severe loss events by comprehensively examining our experience relating to loss events and legal proceedings, external loss data, the control self-assessment results and other relevant information.

In the next step, we prepare scenario data for each identified severe loss event by quantifying the values depending on its occurrence frequency and loss severity, taking into account relevant transaction amounts and restructuring costs as well as BEICFs. In preparing scenario data, we apply an analysis method we deem appropriate for the type and nature of the operational risk involved.

In order to obtain an operational risk equivalent amount that is commensurate with, and appropriate for, our risk profile, we assess the need for an additional scenario or modification to our existing scenarios semi-annually. We then reflect, as necessary, new risks arising as a result of changes in the business environment and the results of the implementation of measures to enhance our internal controls in response to newly identified risks in our scenario data.

In accordance with the provisions of Article 52-25 of the Banking Law of Japan, Mitsubishi UFJ Financial Group (MUFG) adopts the "First Standard" to calculate its capital adequacy ratio based on formulas contained in the standards for the consolidated capital adequacy ratio of bank holding companies (Notification of the Financial Services Agency No. 20, 2006; referred to hereinafter as the "FSA Consolidated Capital Adequacy Notification") to assess capital adequacy in light of the assets we own on a consolidated basis.

With regard to the internal controls structure governing calculation of the consolidated capital adequacy ratio, MUFG received a report from Deloitte Touche Tohmatsu (DTT) LLC, which conducted certain procedures as an independent auditing firm. The procedures that were agreed upon between MUFG and DTT LLC were conducted in accordance with the Japanese Institute of Certified Public Accountants (JICPA) Industry Audit Committee Practical Guidelines No. 30. The procedures were not conducted based on "generally accepted auditing principles," and we did not receive any audit opinion with regard to our internal controls structure or the related consolidated capital adequacy ratio.

Scope of Consolidation

Notes on the scope of consolidation

<p>Differences between those companies belonging to the corporate group (hereinafter, the "holding company group") to which the calculation of consolidated capital adequacy ratio as stipulated in Articles 3 or 15 of the FSA Consolidated Capital Adequacy Notification is applicable and those companies that are included in the scope of consolidation based on the Japanese regulations pertaining to consolidated financial statements</p>	<p>Paragraph 1 of Article 3 of the FSA Consolidated Capital Adequacy Notification states that "the provisions of Paragraph 2 of Article 5 of the Japanese regulations pertaining to consolidated financial statements shall not apply" to "financial subsidiaries" of a bank holding company. Moreover, Paragraph 2 of the said Article 3 states that "insurance-related subsidiaries" of a bank holding company "shall not be included in the scope of consolidation."</p> <p>In addition, with regard to affiliated companies engaged in financial operations, the FSA Consolidated Capital Adequacy Notification states that, provided certain conditions are met, such companies "can be included in the scope of consolidation and in the calculation of the consolidated capital adequacy ratio using pro rata consolidation" (under which only those portions of the affiliated company's assets, liabilities, income and expenditures that are attributable to the bank holding company or any consolidated subsidiaries with investments in the said affiliated company are included in the scope of consolidation).</p> <p>MUFG Group had no companies to which the above exception applied as of March 31, 2011, or March 31, 2012, and there were no differences between those companies belonging to the "holding company group" and those companies that are included in the scope of consolidation based on the Japanese regulations for consolidated financial statements.</p>
<p>Number of consolidated subsidiaries, and names and principal businesses of major consolidated subsidiaries of the holding company group</p>	<p>231 companies as of March 31, 2011; 224 companies as of March 31, 2012 The Bank of Tokyo-Mitsubishi UFJ, Ltd. (banking business), Mitsubishi UFJ Trust and Banking Corporation (trust/banking business), Mitsubishi UFJ Securities Holdings Co., Ltd. (securities business), etc.</p>
<p>Number of affiliated companies engaged in financial operations which are subject to Articles 9 or 21 of the FSA Consolidated Capital Adequacy Notification, and names and principal businesses of affiliated companies engaged in major financial operations</p>	<p>Not applicable as of March 31, 2011 and 2012</p>
<p>Number of companies qualifying for capital deductions under the provisions of Paragraph 1.2 (a)-(c) of Article 8 or Paragraph 1.2 (a)-(c) of Article 20 of the FSA Consolidated Capital Adequacy Notification, and names and principal businesses of any major companies therein</p>	<p>One company as of March 31, 2011 MU Japan Fund PLC (Foreign-registered securities investment corporation) Not applicable as of March 31, 2012</p>

Among the companies specified in Paragraph 1 of Article 52-23 of the Banking Law of Japan, number of companies not belonging to the holding company group that are either exclusively engaged in operations specified in Paragraph 1.10 (a), or that qualify under the provisions specified in Paragraph 1.11, of the said Article 52-23, and names and principal businesses of any major companies therein	Not applicable as of March 31, 2011 and 2012
Outline of restrictions on transfer of funds or equity capital within the holding company group	As of March 31, 2011 and 2012, transfer of funds or capital within the MUFG Group is conducted with all due consideration given to the appropriateness of each action. We give priority in ensuring that each group company maintains sufficient capital level for legal and regulatory compliance purposes. Care is also taken to ensure that actions do not compromise sound and proper operations, while eliminating negative effects on payment capacity, liquidity or profitability.

Companies that are deficient in regulatory capital and total regulatory capital deficiencies

Names of any companies qualifying for capital deductions under the provisions of Paragraph 1.2 (a)–(c) of Article 8, or Paragraph 1.2 (a)–(c) of Article 20, of the FSA Consolidated Capital Adequacy Notification that are deficient in regulatory capital, and corresponding total regulatory capital deficiencies	Not applicable as of March 31, 2011 and 2012
--	--

Composition of Equity Capital

Summary of equity financing methods

MUFG Group is financing its equity by ordinary shares, non-cumulative perpetual preferred shares, preferred securities issued by overseas special purpose companies, perpetual subordinated debt and term subordinated debt. The following are the terms and conditions of the preferred securities issued by overseas special purpose companies, which have a probability of being redeemed pursuant to special provisions for stepped-up interests, etc.

	[1]
(1) Issuer	MUFG Capital Finance 1 Limited
(2) Type of Issued Securities	Fixed/floating rate noncumulative preferred securities (the "Preferred Securities") The holders of the Preferred Securities are entitled to liquidating distributions substantially <i>pari passu</i> with those of the preferred shares issued by MUFG which rank the most senior in priority of payment as to liquidation distributions (for the details of the priority of payment as to dividends, see "(7) Dividend payment" below).
(3) Maturity	Perpetual Provided, however, that on and after the Dividend Payment Date in July 2016, the Preferred Securities may be redeemed at the option of the Issuer, in whole or in part, on any Dividend Payment Date (and, in certain cases, the Preferred Securities may be redeemed at the option of the issuer, in whole, at any time prior to such Dividend Payment Date). Any redemption of the Preferred Securities is subject to compliance with applicable regulatory and other requirements, including the prior approval of the regulatory authority, if then required.
(4) Dividends	On a non-cumulative basis at a fixed/floating rate Dividends will be payable with respect to each dividends period during the first ten years, at a fixed rate, and with respect to each dividends period after July 2016, at a stepped-up floating rate.
(5) Aggregate Issue Amount	\$2,300,000,000 (\$1,000 per security)
(6) Closing Date	March 17, 2006
(7) Dividend Payment	Dividend Payment Date: 25th day of January and July of each year (or if such day is not a business day on the immediately succeeding business day; provided however that, with respect to any Dividend Payment Date falling in or after January 2017, if such day would fall in the next calendar month, such day shall be the immediately preceding business day). Dividend Policy: Dividends shall be due and payable on each Dividend Payment Date, unless a Mandatory Suspension Event or an Optional Suspension Event has occurred as described below. Mandatory Suspension Events: No dividends will be paid if a Liquidation Event, an Insolvency Event, or a Regulatory Event (Note) has occurred and is continuing. Dividends will be reduced or suspended to the extent of a Distributable Profits Limitation or a Dividend Limitation (as described below). Optional Suspension Events: Dividends may be reduced or suspended at the option of MUFG if MUFG has no outstanding preferred shares and, for the most recently ended financial year, has not paid dividends on any of its common shares. Any such reduction or suspension shall only be effective if the payment of dividends on any parity securities is reduced by at least the same percentage. Dividend Limitation: If MUFG makes a final and conclusive declaration to pay less than full dividends or no dividends on its preferred shares which rank most senior in priority of payment as to dividends with respect to any financial year of MUFG, then the aggregate amount of dividends that the Issuer may pay on the Preferred Securities on the Dividend Payment Dates that occur in July of the calendar year in which such financial year ends and the next succeeding January shall be equal to an amount that represents the same proportion of full dividends on the Preferred Securities as the amount of dividends so declared on such preferred shares with respect to such immediately preceding financial year bore to full dividends on such preferred shares.

(Continued)

	<p>Distributable Profits Limitation:</p> <p>(i) With respect to any Dividend Payment Date in July, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the distributable profits of MUFG as of the end of the most recently ended financial year of MUFG after deducting as of the date immediately preceding such Dividend Payment Date:</p> <p>(a) any dividends (other than interim dividends, if any) which have been declared, finally and conclusively, to be paid in relation to any class of preferred shares of MUFG in respect of such financial year, and</p> <p>(b) any dividends and other distributions which have been declared since the end of such financial year of MUFG in relation to parity securities.</p> <p>(ii) With respect to any Dividend Payment Date in January, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the amount by which the amount of Distributable Profits Limitation applicable to the immediately preceding Dividend Payment Date in July as described in (i) above exceeds the aggregate amount of (x) any dividends which have been declared to be paid in relation to the Preferred Securities on the immediately prior Dividend Payment Date in July and (y) (as of the date immediately preceding such succeeding Dividend Payment Date in January) any dividends and other distributions declared in relation to securities described in (i) (b) above which have been declared, on or after such prior Dividend Payment Date in July.</p>
(8) Liquidation Preference	\$1,000 per security

Note: A Liquidation Event, an Insolvency Event, or a Regulatory Event means as follows:

A "Liquidation Event" shall be deemed to occur if (i) liquidation proceedings (seisan) in respect of MUFG under the laws of Japan are commenced or (ii) a competent court in Japan shall have (a) adjudicated the commencement of bankruptcy proceedings (hasan) in respect of MUFG pursuant to the provisions of the Bankruptcy Law or (b) approved a preparation of a reorganization plan for abolishment of all business (jigyo no zenbu no haishi wo naiyotosuru kousei keikakuan) of MUFG pursuant to the provisions of the Corporate Reorganization Law.

An "Insolvency Event" shall be deemed to occur if (i) MUFG is insolvent (shiharai-funo) within the meaning of the Bankruptcy Law or (ii) MUFG's liabilities (other than debt linked to core capital and similar liabilities) exceed its assets or (iii) an administrative agency in charge of financial supervision in Japan has taken any statutory action in relation to MUFG based upon its determination that MUFG is insolvent.

A "Regulatory Event" shall be deemed to have occurred if MUFG's risk-weighted total capital ratio or risk-weighted core capital ratio, calculated in accordance with the related regulations as of the end of any annual or semi annual period were to decline below the minimum percentages required by such regulations.

	[2]
(1) Issuer	MUFG Capital Finance 2 Limited
(2) Type of Issued Securities	Fixed/floating rate noncumulative preferred securities (the "Preferred Securities") The holders of the Preferred Securities are entitled to liquidating distributions substantially <i>pari passu</i> with those of the preferred shares issued by MUFG which rank the most senior in priority of payment as to liquidation distributions (for the details of the priority of payment as to dividends, see "(7) Dividend payment" below).
(3) Maturity	Perpetual Provided, however, that on and after the Dividend Payment Date in July 2016, the Preferred Securities may be redeemed at the option of the Issuer, in whole or in part, on any Dividend Payment Date (and, in certain cases, the Preferred Securities may be redeemed at the option of the issuer, in whole, at any time prior to such Dividend Payment Date). Any redemption of the Preferred Securities is subject to compliance with applicable regulatory and other requirements, including the prior approval of the regulatory authority, if then required.
(4) Dividends	On a non-cumulative basis at a fixed/floating rate Dividends will be payable with respect to each dividends period during the first ten years, at a fixed rate, and with respect to each dividends period after July 2016, at a stepped-up floating rate.
(5) Aggregate Issue Amount	€750,000,000 (€1,000 per security)
(6) Closing Date	March 17, 2006
(7) Dividend Payment	<p>Dividend Payment Date: 25th day of January and July of each year (or if such day is not a business day on the immediately succeeding business day; provided however that, with respect to any Dividend Payment Date falling in or after January 2017, if such day would fall in the next calendar month, such day shall be the immediately preceding business day).</p> <p>Dividend Policy: Dividends shall be due and payable on each Dividend Payment Date, unless a Mandatory Suspension Event or an Optional Suspension Event has occurred as described below.</p> <p>Mandatory Suspension Events: No dividends will be paid if a Liquidation Event, an Insolvency Event, or a Regulatory Event (Note) has occurred and is continuing. Dividends will be reduced or suspended to the extent of a Distributable Profits Limitation or a Dividend Limitation (as described below).</p> <p>Optional Suspension Events: Dividends may be reduced or suspended at the option of MUFG if MUFG has no outstanding preferred shares and, for the most recently ended financial year, has not paid dividends on any of its common shares. Any such reduction or suspension shall only be effective if the payment of dividends on any parity securities is reduced by at least the same percentage.</p> <p>Dividend Limitation: If MUFG makes a final and conclusive declaration to pay less than full dividends or no dividends on its preferred shares which rank most senior in priority of payment as to dividends with respect to any financial year of MUFG, then the aggregate amount of dividends that the Issuer may pay on the Preferred Securities on the Dividend Payment Dates that occur in July of the calendar year in which such financial year ends and the next succeeding January shall be equal to an amount that represents the same proportion of full dividends on the Preferred Securities as the amount of dividends so declared on such preferred shares with respect to such immediately preceding financial year bore to full dividends on such preferred shares.</p>

(Continued)

	<p>Distributable Profits Limitation:</p> <p>(i) With respect to any Dividend Payment Date in July, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the distributable profits of MUFG as of the end of the most recently ended financial year of MUFG after deducting as of the date immediately preceding such Dividend Payment Date:</p> <p>(a) any dividends (other than interim dividends, if any) which have been declared, finally and conclusively, to be paid in relation to any class of preferred shares of MUFG in respect of such financial year, and</p> <p>(b) any dividends and other distributions which have been declared since the end of such financial year of MUFG in relation to parity securities.</p> <p>(ii) With respect to any Dividend Payment Date in January, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the amount by which the amount of Distributable Profits Limitation applicable to the immediately preceding Dividend Payment Date in July as described in (i) above exceeds the aggregate amount of (x) any dividends which have been declared to be paid in relation to the Preferred Securities on the immediately prior Dividend Payment Date in July and (y) (as of the date immediately preceding such succeeding Dividend Payment Date in January) any dividends and other distributions declared in relation to securities described in (i) (b) above which have been declared, on or after such prior Dividend Payment Date in July.</p>
(8) Liquidation Preference	€1,000 per security

Note: A Liquidation Event, an Insolvency Event, or a Regulatory Event means as follows:

A "Liquidation Event" shall be deemed to occur if (i) liquidation proceedings (*seisan*) in respect of MUFG under the laws of Japan are commenced or (ii) a competent court in Japan shall have (a) adjudicated the commencement of bankruptcy proceedings (*hasan*) in respect of MUFG pursuant to the provisions of the Bankruptcy Law or (b) approved a preparation of a reorganization plan for abolishment of all business (*jigyo no zenbu no haishi wo naiyotosuru kousei keikakuan*) of MUFG pursuant to the provisions of the Corporate Reorganization Law.

An "Insolvency Event" shall be deemed to occur if (i) MUFG is insolvent (*shiharai-funo*) within the meaning of the Bankruptcy Law or (ii) MUFG's liabilities (other than debt linked to core capital and similar liabilities) exceed its assets or (iii) an administrative agency in charge of financial supervision in Japan has taken any statutory action in relation to MUFG based upon its determination that MUFG is insolvent.

A "Regulatory Event" shall be deemed to have occurred if MUFG's risk-weighted total capital ratio or risk-weighted core capital ratio, calculated in accordance with the related regulations as of the end of any annual or semi annual period were to decline below the minimum percentages required by such regulations.

	[3]
(1) Issuer	MUFG Capital Finance 4 Limited
(2) Type of Issued Securities	Fixed/floating rate noncumulative preferred securities (the "Preferred Securities") The holders of the Preferred Securities are entitled to liquidating distributions substantially <i>pari passu</i> with those of the preferred shares issued by MUFG which rank the most senior in priority of payment as to liquidation distributions (for the details of the priority of payment as to dividends, see "(7) Dividend payment" below).
(3) Maturity	Perpetual Provided, however, that on and after the Dividend Payment Date in January 2017, the Preferred Securities may be redeemed at the option of the Issuer, in whole or in part, on any Dividend Payment Date (and, in certain cases, the Preferred Securities may be redeemed at the option of the issuer, in whole, at any time prior to such Dividend Payment Date). Any redemption of the Preferred Securities is subject to compliance with applicable regulatory and other requirements, including the prior approval of the regulatory authority, if then required.
(4) Dividends	On a non-cumulative basis at a fixed/floating rate Dividends will be payable with respect to each dividends period during the first ten years, at a fixed rate, and with respect to each dividends period after January 2017, at a stepped-up floating rate.
(5) Aggregate Issue Amount	€500,000,000 (€1,000 per security)
(6) Closing Date	January 19, 2007
(7) Dividend Payment	<p>Dividend Payment Date: 25th day of January and July of each year (or if such day is not a business day on the immediately succeeding business day; provided however that, with respect to any Dividend Payment Date falling in or after July 2017, if such day would fall in the next calendar month, such day shall be the immediately preceding business day).</p> <p>Dividend Policy: Dividends shall be due and payable on each Dividend Payment Date, unless a Mandatory Suspension Event or an Optional Suspension Event has occurred as described below.</p> <p>Mandatory Suspension Events: No dividends will be paid if a Liquidation Event, an Insolvency Event, or a Regulatory Event (Note) has occurred and is continuing. Dividends will be reduced or suspended to the extent of a Distributable Amounts Limitation or a Dividend Limitation (as described below).</p> <p>Optional Suspension Events: Dividends may be reduced or suspended at the option of MUFG if MUFG has no outstanding preferred shares and has not paid dividends on any of its common shares to holders of record as of any and all dates occurring in the most recently ended fiscal year. Any such reduction or suspension shall only be effective if the payment of dividends on any parity securities is reduced by at least the same percentage.</p> <p>Dividend Limitation: If MUFG makes a final and conclusive declaration to pay less than full dividends or no dividends on its preferred shares which rank most senior in priority of payment as to dividends to holders of record as of any and all dates occurring in any fiscal year of MUFG, then the aggregate amount of dividends that the Issuer may pay on the Preferred Securities on the Dividend Payment Dates that occur in July of the calendar year in which such fiscal year ends and the next succeeding January shall be equal to an amount that represents the same proportion of full dividends on the Preferred Securities as the amount of dividends so declared on such preferred shares with respect to such immediately preceding fiscal year bore to full dividends on such preferred shares.</p>

(Continued)

	<p>Distributable Amounts Limitation:</p> <p>(i) With respect to any Dividend Payment Date in July, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the distributable profits of MUFG as of the end of the most recently ended fiscal year of MUFG after deducting as of the date immediately preceding such Dividend Payment Date:</p> <p>(a) any dividends (other than interim dividends, if any) which have been declared, finally and conclusively, to be paid in relation to any class of preferred shares of MUFG to holders of record as of the end of such fiscal year, and</p> <p>(b) any dividends and other distributions which have been declared since the end of such fiscal year of MUFG in relation to parity securities.</p> <p>(ii) With respect to any Dividend Payment Date in January, the amount of dividends to be payable by the Issuer on the Preferred Securities shall be the amount by which the amount of Distributable Amounts Limitation applicable to the immediately preceding Dividend Payment Date in July as described in (i) above exceeds the aggregate amount of (x) any dividends which have been declared to be paid in relation to the Preferred Securities on the immediately prior Dividend Payment Date in July and (y) (as of the date immediately preceding such succeeding Dividend Payment Date in January) any dividends and other distributions declared in relation to securities described in (i) (b) above which have been declared, on or after such prior Dividend Payment Date in July.</p>
(8) Liquidation Preference	€1,000 per security

Note: A Liquidation Event, an Insolvency Event, or a Regulatory Event means as follows:

A "Liquidation Event" shall be deemed to occur if (i) liquidation proceedings (seisan) in respect of MUFG under the laws of Japan are commenced or (ii) a competent court in Japan shall have (a) adjudicated the commencement of bankruptcy proceedings (hasan) in respect of MUFG pursuant to the provisions of the Bankruptcy Law or (b) approved a preparation of a reorganization plan for abolishment of all business (jigyo no zenbu no haishi wo naiyotosuru kousei keikakuan) of MUFG pursuant to the provisions of the Corporate Reorganization Law.

An "Insolvency Event" shall be deemed to occur if (i) MUFG is insolvent (shiharai-funo) within the meaning of the Bankruptcy Law or (ii) MUFG's liabilities (other than debt linked to core capital and similar liabilities) exceed its assets or (iii) an administrative agency in charge of financial supervision in Japan has taken any statutory action in relation to MUFG based upon its determination that MUFG is insolvent.

A "Regulatory Event" shall be deemed to have occurred if MUFG's risk-weighted total capital ratio or risk-weighted core capital ratio, calculated in accordance with the related regulations as of the end of any annual or semi annual period were to decline below the minimum percentages required by such regulations.

Exposures related to unsettled transactions	0.0	0.0
Exposures for other assets	299.2	300.0
Standardized Approach (excluding securitization exposures)	868.6	904.3
Securitization exposures (Note 4)	275.9	243.2
Portfolios under the IRB Approach	240.6	216.3
Portfolios under the Standardized Approach	35.2	26.8
Capital requirements for credit risk of equity exposures under the IRB Approach	581.9	459.0
Exposures subject to transitional arrangements (grandfathering provisions) (Note 5)	301.7	286.8
Market-Based Approach (Simple Risk Weight Method) (Note 6)	86.0	68.4
Market-Based Approach (Internal Models Method) (Note 6)	—	—
PD/LGD Approach (Note 6)	194.2	103.7
Capital requirements for exposures relating to funds	249.6	202.2
Total	8,317.8	7,454.6

- Notes: 1. Credit risk-weighted assets were calculated using the AIRB approach. However, as an exemption to this approach, the Standardized Approach is used for calculations with credit risk-weighted assets at some subsidiaries in cases where the figures for such subsidiaries are expected to be minor compared with the total. In addition, the adoption of the IRB approach is due to be phased in from the end of March 2013 at UnionBanCal Corporation
2. Capital requirement for portfolios under the IRB Approach is calculated as "credit risk-weighted asset amount x 8% + expected losses." In this calculation, the amount of capital requirement is including any exposures qualifying as capital deduction, and the credit risk-weighted asset amount is multiplied by the scaling factor of 1.06. Capital requirements for portfolios under the Standardized Approach are calculated as "credit risk-weighted asset amount x 8%."
3. Exposures to calculate the amount of credit risk-weighted assets as stipulated in Article 145 of the FSA Consolidated Capital Adequacy Notification.
4. Including amounts equivalent to increase in equity capital resulting from a securitization exposure, as a deduction from Tier 1 capital elements.
5. Exposures to calculate the amount of credit risk-weighted assets as stipulated in Article 13 of the Supplementary Provisions to the FSA Consolidated Capital Adequacy Notification.
6. Exposures to calculate the amount of credit risk-weighted assets as stipulated in Article 144 of the FSA Consolidated Capital Adequacy Notification.

Capital requirements for market risk
Billions of yen

	March 31, 2011	March 31, 2012
Standardized Method	80.9	102.8
Interest rate risk	39.6	39.2
Equity position risk	37.9	58.1
Foreign exchange risk	2.2	3.1
Commodity risk	1.1	2.5
Options transactions	—	—
Internal Models Approach	78.5	87.5
Total	159.5	190.4

Note: As for market risk, the Internal Models Approach is mainly adopted to calculate general market risk (in some cases the Standardized Method is adopted) and the Standardized Method is adopted to calculate specific risk.

Capital requirements for operational risk
Billions of yen

	March 31, 2011	March 31, 2012
The Advanced Measurement Approach	—	269.6
The Standardized Approach	528.2	—
The Basic Indicator Approach	—	114.2
Total	528.2	383.8

Note: Operational risk was calculated using the Standardized Approach as of March 31, 2011 and using the Advanced Measurement Approach and Basic Indicator Approach as of March 31, 2012.

Consolidated total capital adequacy ratio, Tier 1 capital adequacy ratio and total capital requirement (consolidated basis)
Billions of yen

	March 31, 2011	March 31, 2012
Consolidated total capital adequacy ratio	14.89%	14.91%
Consolidated Tier 1 capital adequacy ratio	11.33%	12.31%
Consolidated total capital requirements	7,024.3	6,836.5
8% of credit risk-weighted assets	6,336.5	5,733.7
Capital requirements for market risk	159.5	190.4
Capital requirements for operational risk	528.2	383.8
8% of the amount by which the capital floor value, which is obtained by multiplying the risk-weighted asset amount as calculated according to the Former Notification (Note) by a predetermined adjustment factor, exceeds the risk-weighted asset amount as calculated according to the FSA Consolidated Capital Adequacy Notification	—	528.4

Note: Hereafter, this refers to Ministry of Finance (MOF) Notification No. 62, 1998, which was based on the provisions of Article 52-25 of the Banking Law of Japan.

Total	1,143,997	(193,924)	1,123,773	(20,224)

Notes: 1. Although the specific allowance for credit losses does not include the allowance relating to any securitization exposures and exposures relating to funds, the allowance relating to these exposures is not excluded from both the general allowance for credit losses and the allowance for loans to specific foreign borrowers, owing to the fact that MUFG does not manage provisioning with respect to each asset class based on Basel II.

2. Industry classifications apply primarily to allowances related to exposures held by the Bank of Tokyo-Mitsubishi UFJ and Mitsubishi UFJ Trust and Banking (both on a non-consolidated basis). The bulk of provisions relating to exposures held by other subsidiaries are included in the "Others" category.

Notes: 1. Figures exclude any equity exposures based on calculations where credit risk asset values are assessed using the Market-Based Approach as well as any equity exposures where a 100% risk weight is applied based on the transitional arrangements stipulated in Article 13 of the Supplementary Provisions to the FSA Consolidated Capital Adequacy Notification.

2. For equity exposures under the PD/LGD Approach, the weighted average PD may not match the weighted average RW because risk weight minimums including expected losses are set 100% for strategic equity investments, 200% for other publicly traded equities and 300% for other non-listed equities.

Estimated weighted average LGD	38.14%	40.86%	40.48%	90.00%	43.13%	82.68%	44.89%
Interim FY2011 actual losses	10,800	(1)	(0)	17	880	11,440	8,001
Interim FY2011 estimated losses (Note 4)	68,081	10,022	4,366	2,119	11,130	149,462	103,998
Initial EAD	10,908,322	14,094,590	1,725,365	830,210	1,057,239	4,091,361	1,149,244
Estimated weighted average PD	1.73%	0.19%	0.67%	0.28%	2.01%	4.80%	13.60%
Estimated weighted average LGD	35.86%	36.90%	37.55%	90.00%	50.36%	76.09%	62.67%
Interim FY2011: Discussion of the factors	Actual losses on exposures were lower than initial estimated losses, reflecting repayments on defaulted exposures and other factors such as loan normalization.						

Notes: 1. Actual losses include the following amounts related to defaulted exposures: write-offs against allowances, losses on the disposal of claims, debt forgiveness or loan waivers, and impairment losses on securities. Actual losses incurred by Mitsubishi UFJ Trust and Banking Corporation equal the aggregate figures for the banking account and for trust accounts for which repayment of the principal to the customers is guaranteed.

2. The initial EAD under FY2006 estimated losses was used for a preliminary calculation under the FIRB Approach at the end of March 2006, and was not used to calculate an official figure of capital adequacy ratio.

3. Estimates for PD and LGD under FY2006 estimated losses were used for preliminary calculations under the FIRB Approach at the end of September 2006, and were not used to calculate official figures of capital adequacy ratio. Estimates for PD and LGD that were used for preliminary calculations under the FIRB Approach at the end of March 2006 were not used, because such estimates included temporary factors due to the merger of Mitsubishi Tokyo Financial Group, Inc. with UFJ Holdings, Inc.

4. Estimated losses for Interim FY2011 represent the anticipated losses for the full year estimated at the beginning of the fiscal year.

Notional principal amount of credit derivatives used for credit risk mitigation purposes	1,076.6	766.6

Notes: 1. Credit equivalent amounts are calculated using the Current Exposure Method.

2. These benefits are equal to the figure obtained by subtracting credit equivalent amounts prior to credit risk mitigation benefits due to collateral from the sum of aggregated gross replacement costs and total gross add-ons.

Securitization Exposures (Subject to calculation of credit risk assets)
Information on underlying assets
Billions of yen

	March 31, 2011		FY2010		
	Amount of underlying assets at period-end (Note 1)		Cumulative amount of underlying assets in default or contractually past due 3 months or more		
	Underlying assets relating to retained securitization exposures	Underlying assets relating to securitization transactions during this period with no retained securitization exposures (Note 2)	Underlying assets relating to retained securitization exposures	Underlying assets relating to securitization transactions during this period with no retained securitization exposures (Note 3)	Losses on underlying assets incurred during this period (Note 4)
Traditional securitizations (asset transfer type)	2,233.3	—	31.3	—	13.7
Residential mortgage	1,965.6	—	30.2	—	13.7
Apartment loan	156.5	—	1.0	—	—
Credit card receivables	—	—	—	—	—
Other assets	111.2	—	0.0	—	—
Synthetic securitizations	256.6	—	—	—	—
Residential mortgage	—	—	—	—	—
Apartment loan	—	—	—	—	—
Credit card receivables	—	—	—	—	—
Other assets	256.6	—	—	—	—
Sponsor of asset-backed commercial paper (ABCP) program	19,947.2	—	445.9	1,538.4	1,309.3
Residential mortgage	—	—	—	—	—
Apartment loan	—	—	—	—	—
Credit card receivables	12,204.1	—	291.1	1,238.7	1,199.1
Account receivables	5,279.3	—	152.2	292.5	95.7
Leasing receivables	937.9	—	0.0	0.0	6.6
Other assets	1,525.7	—	2.6	7.0	7.8
Total as an originator	22,437.2	—	477.3	1,538.4	1,323.1

Notes: 1. The amount of underlying assets relating to sponsor of ABCP programs includes underlying assets related to ABCP programs sponsored by multiple financial institutions, including certain consolidated subsidiaries of MUFG.

2. The amount of underlying assets refers only to those cases in which the securitization exposures associated with a securitization conducted during this period was wholly transferred to third parties.

3. Figures show cumulative totals for this period of underlying assets either in default or contractually past due 3 months or more arising from securitization transactions in cases where the securitization exposures associated with a transaction conducted during this period was wholly transferred to third parties, or where no exposure was retained at the end of this period from a securitization conducted during this period due to related maturity.

4. Losses with traditional or synthetic securitizations are based on the projected accounting losses for holding the underlying assets without conducting the relevant securitization. With sponsor of ABCP programs, since it is extremely rare for such schemes to result in losses on any retained securitization exposure, it is difficult to obtain generally relevant information relating to losses as based on certain definitions. These figures therefore aggregate cases where actual economic losses have been recognized with cases where the loss has been valued on the same basis as the underlying defaulted assets. Losses on underlying assets relating to sponsor of ABCP programs differ from losses incurred by MUFG.

(Application of credit risk mitigation methods to re-securitization exposures)

Not applicable as of March 31, 2012.

(Credit risk-weighted asset amount calculated using transitional arrangements for securitization exposures)

	Billions of yen	
	March 31, 2011	March 31, 2012
As an originator	6.0	3.7
As an investor	67.1	29.1
Total	73.2	32.9

Note: Figures refer to credit risk-weighted assets calculated using transitional arrangements as stipulated in Article 15 of the Supplementary Provisions to the FSA Consolidated Capital Adequacy Notification. Specifically, in those cases where the standardized approach is applied as an exception that include securitization exposures, figures refer to credit risk-weighted assets calculated using a transitional arrangement whereby such assets values are capped at the greater of the value based on the Former Notification as stipulated in the Supplementary Provisions to the FSA Consolidated Capital Adequacy Notification or the value if the underlying assets were retained.

Securitization Exposures (Subject to calculation of market risk equivalent amount)
Information on underlying assets

There were no securitization exposures during the fiscal year ended March 31, 2012 or as of March 31, 2012.

(Amount of assets held for the purpose of securitization)

There were no assets held for the purpose of securitization transactions as of March 31, 2012.

Information on securitization exposures retained (By type of underlying asset)

There were no assets held as an originator as of March 31, 2012.

	Billions of yen			
				March 31, 2012
